

Class 4: LO – To learn about River features on a Floodplain:

Task: Copy the diagram below neatly into your book and add the labels and explanations:

River Meandering and Ox-Bow Lake Formation on a Floodplain:

Floodplains are often agricultural land, as the area is very fertile because it's made up of **alluvium** (deposited silt from a river flood). The floodplain is often a wide, flat area caused by **meanders** shifting along the valley.
