INSTRUCTIONS ON HOW TO OPERATE YOUR TIME MACHINE

(WE REQUEST YOU FOLLOW THESE INSTRUCTIONS TO THE LETTER, LEST YOU ARE DISAPPOINTED WITH YOUR TIME TRAVEL EXPERIENCE, OR, ARE SIMPLY LOST IN TIME)

1. Ensure there are no unauthorised person within the vicinity.
2. Carefully make oneself comfortable within the machine, paying particular attention to the safety buckles.
3. The safety side barrier should be locked in place to avoid being catapulted from the machine during the journey.
4. The engine initiation buttons should all be flicked into the upwards position to engage the ion-battery.
5. Once the ion-battery dial reads 'maximum power', slowly manoeuvre the lever into the 'Engage' position - one will be certain of this following a 'click'.
6. The two handles on either side of the steering column must be gripped tightly and both feet placed on the rubber pedals beneath the seat.
7. Pull back the steering column smoothly until an alarm bell rings three times.
8. Remove one of your hands from the column and **grip** the quantum flux operating lever.
9. The lever must be delicately guided into place until the atomic dial approaches 29.7 percent, however, be careful in avoiding putting strain on the fragile lever itself.
10. Once the dial hits 29.7 percent, the time bubble should activate. Finally, Turn the 'year Required' dial on the left arm-rest, to the year to which you wish to travel
11. Hold on tight and see you in the future.
