

# Eating and Digestion

## Learning Objective:

To investigate how the digestive system works.

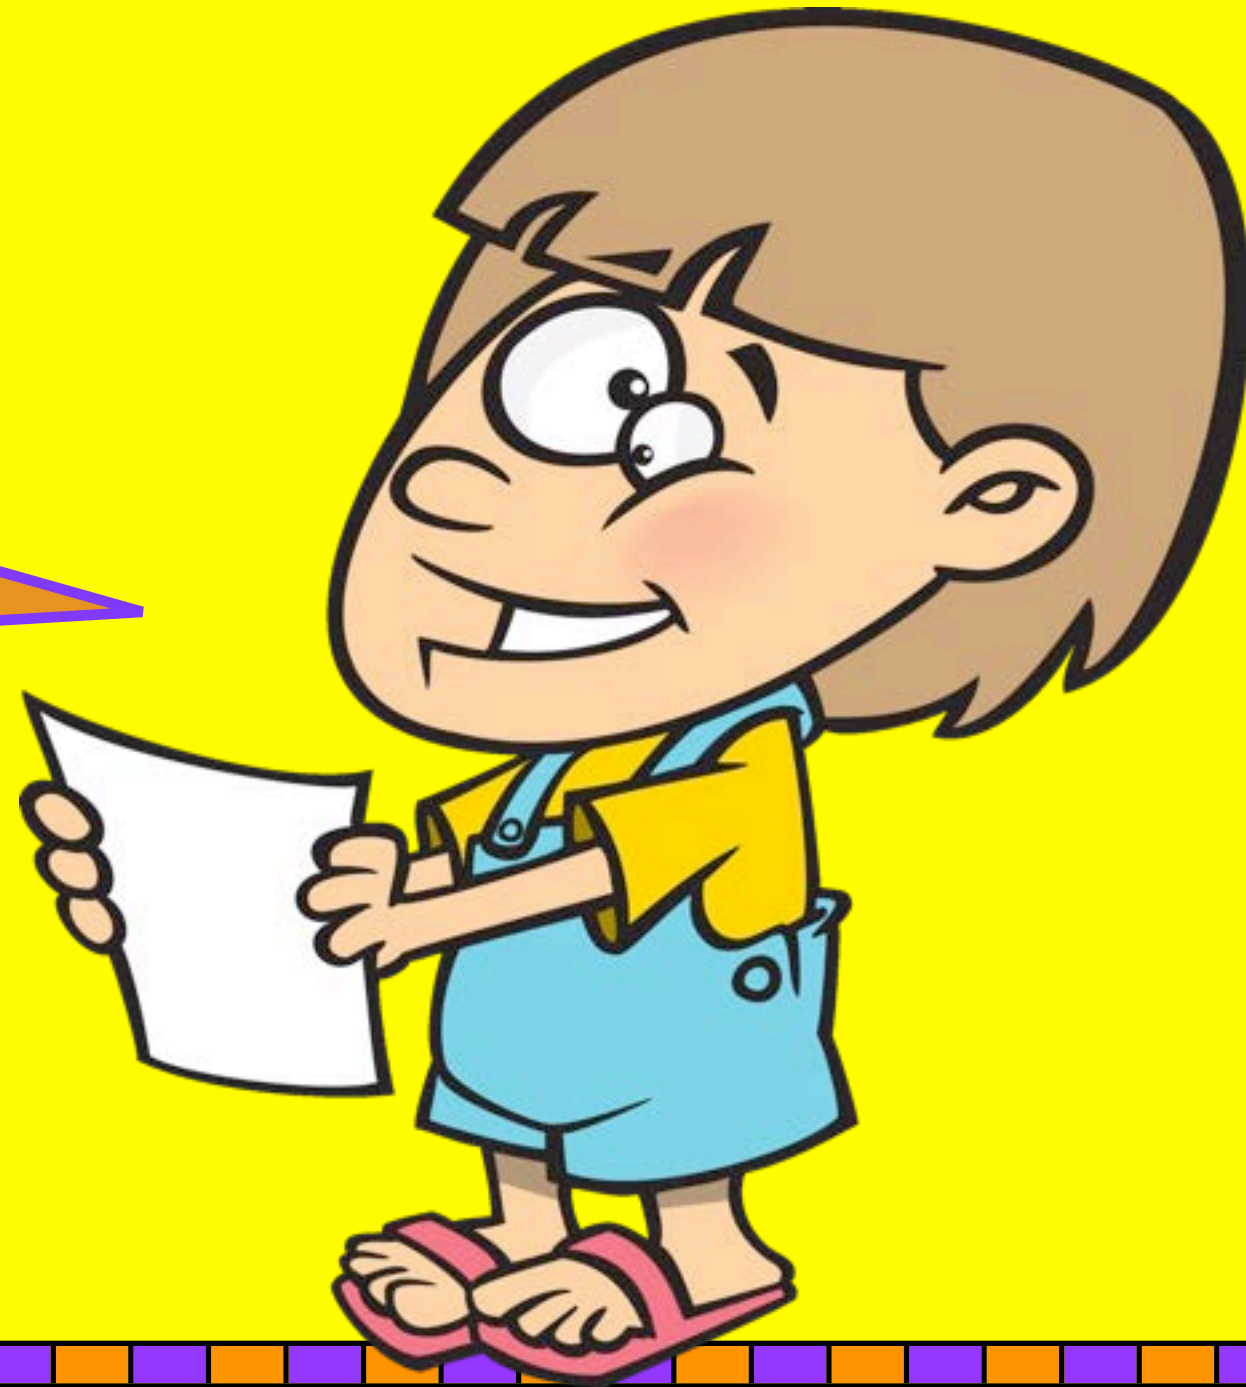

**We have already found out that our bodies need food to survive and that our teeth help us to break up food, but have you ever wondered what happens to your food once you have swallowed it?**

**Draw a diagram on a mini-whiteboard or a piece of paper to show what you think happens inside your body when your food is eaten. Label any organs you know the names of.**

# How accurate do you think your diagram is?

Have a look at the diagram of the digestive system on the next slide. How similar is your own diagram?

tongue

liver

gallbladder

large intestine

anus

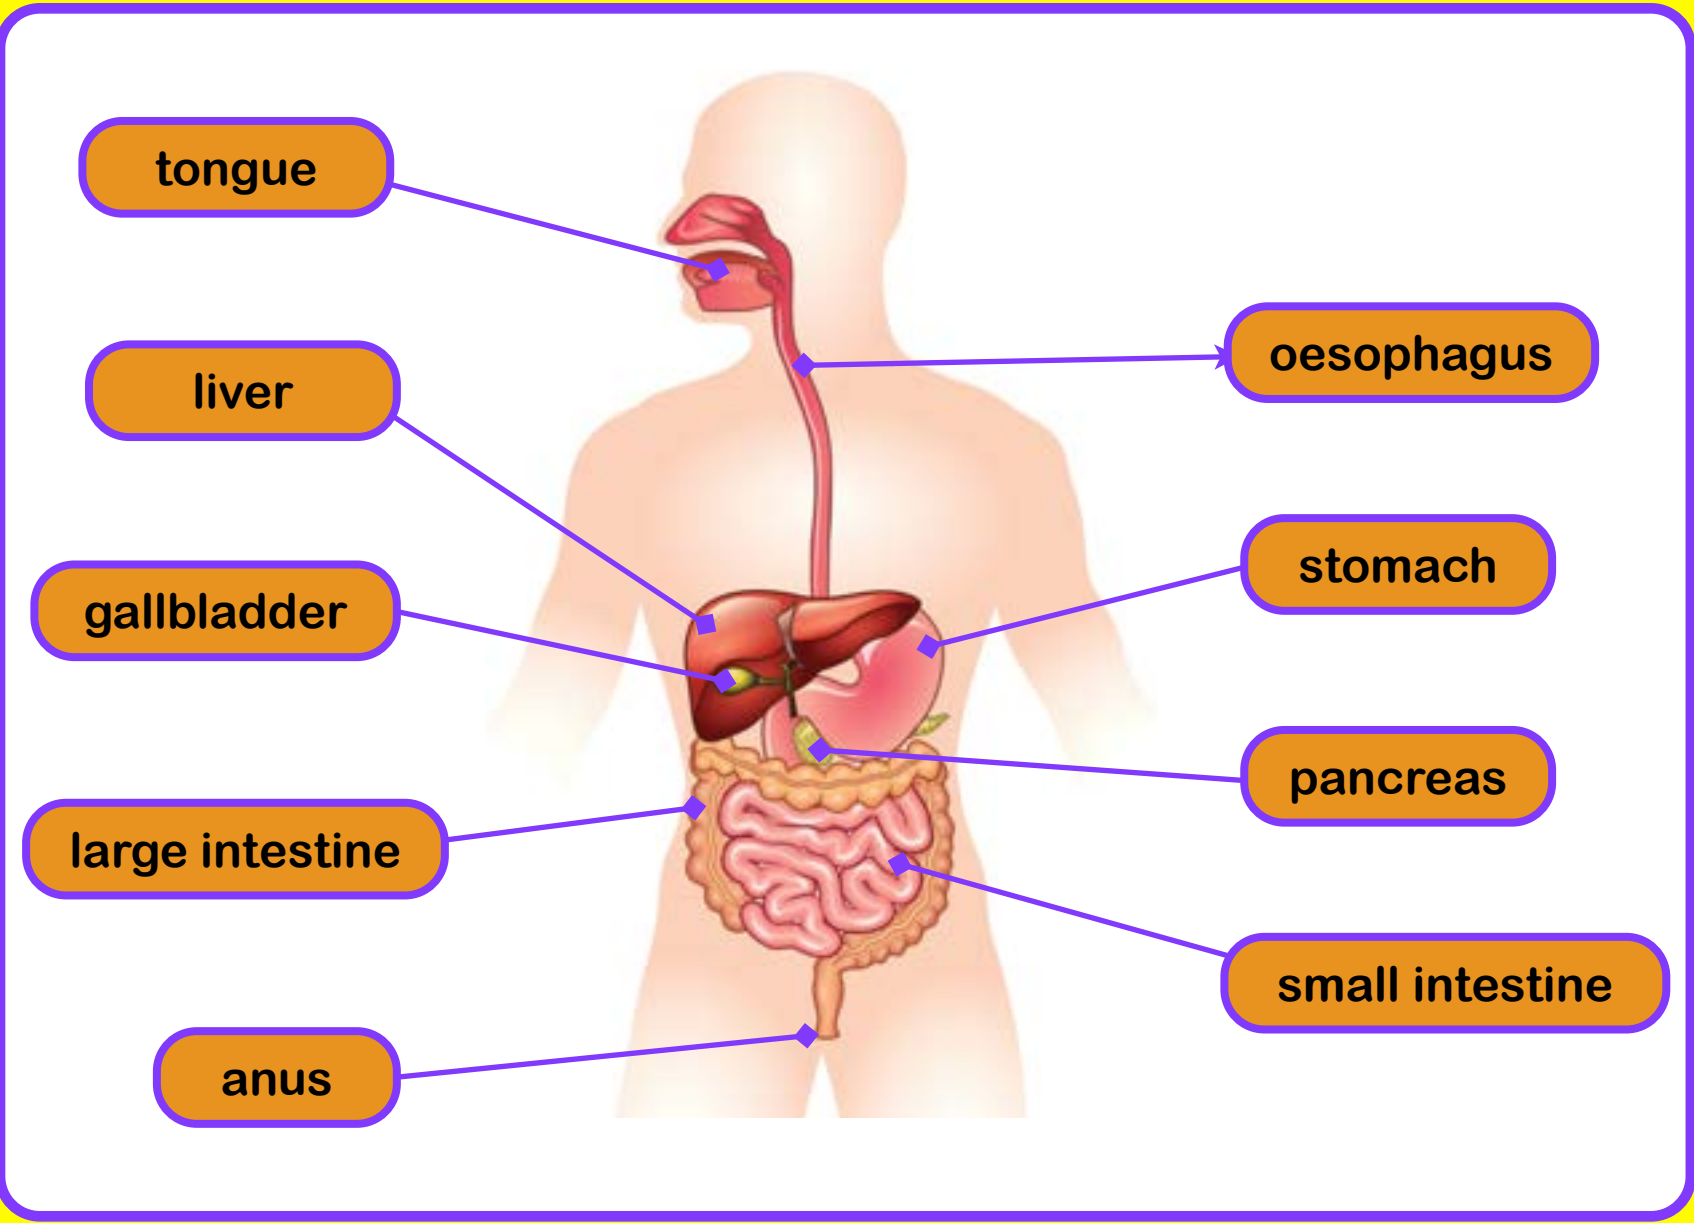

oesophagus

stomach

pancreas

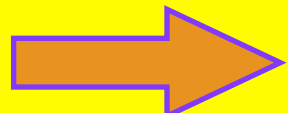

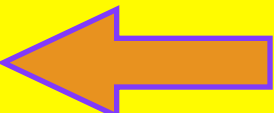

small intestine

Have we found out how our digestive system works now?

What questions about the digestive system would you like to know the answer to?  
Discuss your ideas with a partner.

What questions did you think of? Let's write a list...
